

EcoBuilt Garage Door From Overhead Door

One of our long-term trade partners has been Overhead Door Company of Washington D.C. They consistently deliver a high quality product, on time and installed professionally. They have introduced their EcoBuilt® line of doors, which uses "recycled unused Douglas-fir from mills and fuses it with exterior grade resins and wax to form a hard-working homogenous door panel. Specially formulated to resist moisture, these door panels actually outperform wood in tests of weather and time."

The technology was originally developed 40 years ago, and with the green revolution in full swing, has now become a key product in their line-up. "Because of their unique composition, all EcoBuilt® garage door panels use 100% recycled wood fiber and are SCS Certified: Minimum 88% Recycled Content.

EcoBuilt® garage doors resist splitting, warping and cracking, unlike conventional wood doors, and they won't dent or bend like steel doors. They're easy to install and they come prepped for painting, eliminating the need for exterior priming."

For The Incredibly Green Home, Tim Hardesty and the Overhead Door Company of Washington D.C. will generously be providing an EcoBuilt Acadia Verde Collection Elite door. Thank you for your support, we know the door is going to be fantastic, and we look forward to doing business in the future!
